Share. Send. Done.

Send files. Not headaches.

Pick a file, share the link or a QR code, and your classmate downloads it straight from your browser. No account needed.

Hi, I'm Ember!

- Biology-notes-term-3.pdf — PDF · 2.4 MB
- Group-project-slides.pptx — Presentation · 9.8 MB
- Lab-photo-1.jpg — Image · 2.0 MB

Your name (optional): e.g. Class 4B

Link expires after: 1 hour

Create transfer →

Sharing marks or student records? Only send them to people who should see them. Keep this tab open while the transfer runs.

How it works

1

Choose files

Pick them or drag them in. Add as many as you like to one transfer.

2

Share the link

Send the link, or let a friend scan the QR code. Nobody needs an account.

3

They download

Their browser connects to yours and the files travel between the two devices.

Your files don't pass through our server

A small signaling server only helps two browsers find each other. On strict school networks a direct connection can fail unless a relay server is set up. Sending peer to peer can't stop a recipient from saving or sharing what they download.
